

VETERINARY REPORT FOR STALLIONS REGARDING SEMEN IMPORT TO SWEDEN

Foreign stallions that are to be approved for semen import to Sweden, within the breeding program of the Swedish Warmblood Association (SWB), must have a health certificate. The certificate must be issued by a veterinarian working in conjunction with the breeding federation of which said stallion is approved.

The veterinary report should include the following:

1. Stallion name, identification number and pedigree
2. Owner name and address
3. Results of radiographs of stallion's stifles and hocks, taken **after July 1st** the year when the stallion was 2 years old. Results must indicate whether there are any signs of Osteochondrosis or Osteochondritis dissecans.
4. Attestation that the stallion has normal reproductive organs, including testes. Rotation of one or both testes, significant differences in size or firmness, absence of one testis by nature or due to surgical intervention, or other significant abnormalities must be noted.

The Veterinary Report should be sent to:

Swedish Warmblood Association
Roslövsvägen 11
